NIL-1 TREE INFORMATION/July 2010

HEIGHT: Average 45 ft.

SPREAD: Average 50 ft.

DBH: Average 4 ft. 6 in.

QUANTITY: Approximately 18 in Row

NATIVE TO: China, Japan

LANDMARK DATE: March 17, 1972

The rows of camphors along the 37000 block of Second Street in the Niles District are a spectacular sight. Their canopies shade the homes and streets from hot summer rays, and also provide aesthetic appeal to the neighborhood.

The camphor is a broadleaf evergreen tree that is native to China and Japan. It produces glossy yellow-green leaves, small white flowers, and blackberry-like fruit.[4]
