HEIGHT: 60 ft.

QUANTITY: 1

SPREAD: 35 ft.

NATIVE TO: Southeastern United States

DBH: 3 ft.

LANDMARK DATE: June 19, 2012

The Bald Cypress was planted in 1878 at Shinn Park and is located near the Maidenhair Tree and Chilean Bellota. The Bald Cypress can grow up to 100 feet tall in the wild and up to 70 feet in gardens. Its half inch-long leaves are feathery and delicate and yellow-tinged green in color. This tree tolerates wet conditions and develop knobby growth called knees when growing in water-logged soil. In the southeastern United States, Bald Cypresses are usually found in swamps and commonly have buttressed trunk bases.<sup>34</sup>
